An online educational
resource for eligible patients

Entresto®
sacubitril/valsartan

Entresto is indicated in adult patients for treatment of symptomatic chronic heart failure with reduced ejection fraction.

The online resource that help patients prescribed Entresto on their treatment journey

MyEntresto is designed to help:

- **Boost understanding of heart failure**
- **Improve adherence to treatment** ¹

Whether you are prescribing ENTRESTO® (sacubitril/valsartan) for your eligible chronic HFrEF patients, or are supervising their ongoing treatment, ensuring adherence to their medication is critical. Lack of adherence could be because of many factors including in the patient's symptoms, debilitating side effects or a busy lifestyle.

To support you in empowering your patients to stay on top of their condition and treatment, with the hope of improving adherence, Novartis has created and funded **MyEntresto in partnership with HF patients**: a patient portal dedicated to supporting the ENTRESTO community.

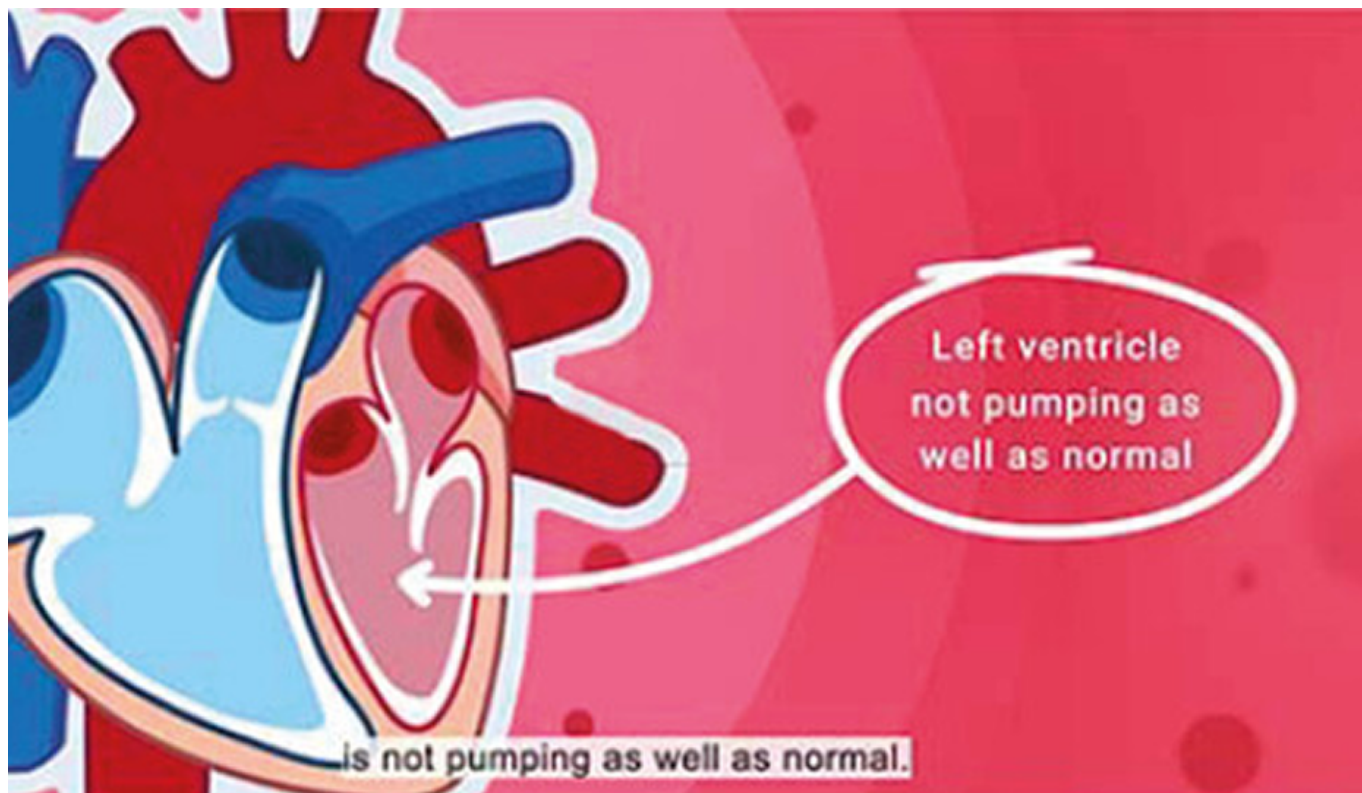

Designed to educate patients about their chronic heart failure/chronic HFrEF and explain how ENTRESTO works; by encouraging the use of the portal to your patients, you can improve their confidence and understanding around their treatment.
